Why the new Kewiga Works website is an upgrade

Oct 31, 2026 · @COLLINS DIVINE GARBA

The new React site fixes every website problem in the October 2026 improvement report that the previous version left open: it is easier to act on from a phone, more honest, easier to find on Google and compliant with Nigerian company and data rules. It has 16 pages instead of 8 and is ready to deploy once a few owner details are added.

At a glance

The live kewigaworks.com is still the original 6.1 MB Muse AI page. The previous rebuild (hand-coded HTML, never deployed) fixed the size but not the issues in the report. The new site keeps that rebuild's content and fixes the rest.

Area	Previous rebuild	New React site
Pages	8	16, including 4 service pages, Areas, About, Terms and Privacy
Main action on phones	Hidden in the menu	"Chat on WhatsApp" bar on every phone screen
Button wording	Three different phrases	"Get started on WhatsApp" everywhere
Booking form	6 fields, none required	Name, area and plan required; the rest optional
Example ratings	"Rated 5/5" on two mock-ups	Removed; clearly labelled illustration
Plan cards	60–90-word paragraph each, 4 cards side by side	One-line promise, value beside price, homes and businesses split
Guarantee	Mentioned	Named "30-Day Fix-It-Free Guarantee" with claim steps and exclusions
Company details	Founder's name only	KEWIGA WORKS LTD, RC 9965563, "Verify us on CAC" in every footer

Area	Previous rebuild	New React site
Privacy policy and terms	None	Drafts ready for lawyer review
Service pages for Google	None	Plumbing, electrical, AC servicing, painting
Hero photo on phones	217 KB	53 KB
Fonts	Loaded from Google	Served from the site itself
Menu	8 links	5 links

More visitors become customers

The new site puts the one action that matters, a WhatsApp message, within one tap on every page. About 75% of Nigerian web visits come from phones, and on the previous version the main button sat inside the collapsed menu.

- **Sticky WhatsApp bar on phones.** It stays at the bottom of the screen and slides away while a form is showing, so it never covers the send button.
- **One phrase everywhere.** "Get started on WhatsApp" replaces "Book a repair", "Get covered before the next leak" and "Prepare booking request". Non-subscribers can't book a repair, so the old wording promised the wrong thing.
- **Shorter form.** Name, area and plan are required, so an empty form can no longer send a blank message. The issue and referrer fields are optional, and a "Just chat with us" link skips the form.
- **Clearer plans.** Visitors pick "For homes" or "For landlords & businesses" first, so a homeowner compares two plans, not four. Each card shows a one-line promise and the labour value next to the price. The job-counting rules sit in one box with a worked example, instead of being repeated four times.
- **Pre-filled booking.** Choosing a plan or finishing the plan finder fills in the form and scrolls to it.
- **You can see which buttons work.** Every WhatsApp message ends with a tag such as [web-hero] or [web-mobile-bar], so you can count which part of the site brings customers without installing analytics.

Trust: proof a visitor can check

The new site replaces claims that could read as fake with promises a new customer can check. Competitors such as Wrkman already claim "verified artisans" and a "30-day guarantee", so Kewiga has to make its versions concrete.

- **No fake-looking reviews.** "Rated 5/5 by the customer" and "You rated it 5/5" are gone. The WhatsApp conversation is labelled as an illustration, not a real customer. "Most popular" became "Recommended for most homes", since there are no sign-up numbers yet.
- **A named guarantee.** The "30-Day Fix-It-Free Guarantee" now has three claim steps and written exclusions, and it is linked to the full terms.
- **A six-point vetting checklist:** ID check, guarantor call, practical trade test, artisan named before arrival, completion code, guaranteed work.
- **A real person behind the business.** A founder block with your name, company and RC number, ready for your photo and story.
- **A fraud warning.** "Pay only into the KEWIGA WORKS LTD account. Never pay an artisan directly" appears on the home page, the plans page, the form and every footer.
- **An honest founding-member offer.** It appears only once you set the offer, and its counter shows only real numbers.

Found on Google

The new site targets what Abuja residents actually type, "[trade] in Abuja", instead of "maintenance subscription", which nobody searches for.

- **Four service pages:** Plumber, Electrician, AC repair and servicing, and Painter in Abuja. Each has its own common jobs with their price tier (₦7,000 / ₦12,000 / ₦20,000), what's labour and what's parts, how to book, and 3–4 trade questions. The AC page says "home and office" and "split units" so it doesn't compete with car AC searches.
- **A services hub and one Areas page** listing the ten districts, rather than ten near-identical suburb pages that Google treats as spam.
- **Page titles include Abuja** and the words people search for, such as "Property & Facility Maintenance for Estates and Offices in Abuja" and "Artisan Jobs in Abuja".
- **Richer hidden business data** for Google and AI assistants: legal name, RC number, the four plan prices, opening hours and the ten districts. Each service page and the FAQ also carry their own structured data.
- **Every page is pre-built as plain HTML**, so Google reads the full content without running any code. The sitemap now lists all 16 pages.

Legal: what Nigerian rules now expect

The previous site had no company name, RC number, privacy policy, terms or refund policy. The new site adds all of them. Payment providers such as Paystack also ask for these pages before approving online payments.

- **Company particulars (CAMA 2020, enforced since 1 August 2026):** KEWIGA WORKS LTD and RC 9965563 in every footer with a "Verify us on CAC" link, plus an About page with company details. The registered office address will appear as soon as it's added.
- **Privacy Policy (NDPA 2023, GAID 2025):** what is collected from customers, artisans, guarantors and referrers, why, who receives it (including WhatsApp and the artisans), data leaving Nigeria, how long it's kept, and the right to complain to the NDPC.
- **Subscription Terms (FCCPA 2018):** prices, labour vs parts, billing and renewal, a clear 3-day cancellation cut-off, refunds, guarantee terms, damage, rewards and referral rules, and complaints to the FCCPC.
- **Consent on the forms:** a privacy notice under every form, and a required tick box confirming the artisan's guarantor agreed to be contacted.
- **Rewards liability:** "never expire" became "valid while subscribed, plus 90 days after cancelling", which removes an open-ended promise.

Both legal pages show a "draft for legal review" notice until a Nigerian lawyer has checked them.

Speed, smoothness and upkeep

The new site downloads less image data on phones, feels smoother to use, and is quicker to update.

- **Phone-sized photos.** Phones get 480 px or 760 px copies of each photo. The hero image drops from 217 KB to 53 KB.
- **Own fonts.** Fonts are served from kewigaworks.com, not Google. That means one less connection, and visitors' IP addresses aren't sent to Google.
- **Caching.** Build files are cached for a year and images for a month, so return visits load almost instantly.
- **Smooth motion:** pages fade in, sections ease in on scroll, the plan toggle slides, FAQ answers open smoothly, and the phone menu animates. All motion switches off for visitors who have "reduce motion" set.
- **Readable colours.** Green text and WhatsApp buttons now use darker greens that pass the 4.5:1 contrast standard. The old ones measured about 2.9:1.

- **Easier to change.** Phone number, prices, plans and areas live in one file (src/lib/site.ts), and a change there updates every page. Shared parts such as the header, footer, plan cards and booking form are built once in React and reused.
- **Old links still work.** Old /referrals/ and /#/plans links redirect to the right new pages.

Trade-offs and what's still needed

The upgrade has one cost: React adds about 103 KB of shared code that the hand-coded version didn't have. The home page HTML is 84 KB against the old rebuild's 31 KB. On a phone, the smaller photos offset most of this, and the shared code is cached after the first visit. Both are still a tiny fraction of the 6.1 MB live page. Run PageSpeed Insights after launch to confirm.

Before launch:

- [ ] Add the registered office address and directors' names
- [ ] Add a founder photo and 2–4 sentences on why you started Kewiga Works
- [ ] Decide the founding-member offer, or leave it hidden
- [ ] Confirm the drafted policies (3-day cancellation, 7-day refund, free month for a missed booking window, rewards valid 90 days after cancelling)
- [ ] Have a Nigerian lawyer review the Privacy Policy and Subscription Terms
- [ ] Build and drag the out folder into Netlify, then submit the sitemap in Search Console

The report's off-site actions still apply: Google Business Profile, asking every customer for a review, and directory listings.
